

Get oriented in 60 seconds

The Atlas plots clean-energy projects, grid infrastructure and AI data centers across the globe. Toggle layers on the left rail, jump to a region using search, then click any project for details.

LAYERS PANEL (LEFT RAIL)

Energy types	Toggle Wind, Solar, Hydro, Geothermal, Nuclear, Hydrogen, Storage and Data Centers. The number badge shows how many sites are active in that layer.
Grid	Transmission Lines and Substations are on by default. The bottom strip reads "GRID 307 lines 205 sub" globally.
All On / All Off	Two buttons at the bottom of the rail flip every layer at once.
Heatmap	Density overlay combining wind + solar + hydro. Useful at world-zoom to see global concentration.
DC Links	Draws fiber-style connections from each data center to nearby renewables. Works without Data Centers being toggled on.

MAP CONTROLS

Pan & zoom	Click-drag to pan. Mouse-wheel or +/- buttons (lower right) to zoom. The pin badge at top-left shows your current center, country and zoom level.
Project markers	Each circle is a project; the colored ring shows its pipeline stage. Click a marker for the detail panel.
Project Stages	Bottom strip: Applied · Under Study · Agreement Signed · Permitted · Under Construction. The ring around every marker matches.
Theme	Top-right toggle. Light mode is cream land + saturated blue ocean. Dark mode is warm slate land + near-black ocean.
Language	Map labels can switch between 8 languages (top header dropdown). Project data stays in English.

TOP HEADER

Search	Find a project, country or operator. Type at least 2 characters.
Database	Tabular browser of every project. Filter and sort.
Newsroom	Curated industry headlines. Every "Read More" link runs a Google search for the article so you always land on a live page.
Help	This guide and a list of every keyboard shortcut.

PRO TIPS

Compare	Open up to 3 projects side-by-side from the database view.
Save PDF	Inside any news article you can save a branded one-page summary.
Copy	Articles include a Copy button to grab title + source + URL for outreach.
Permalink	Project detail panels include a shareable URL with type & index parameters.
